Rithik
Munukala

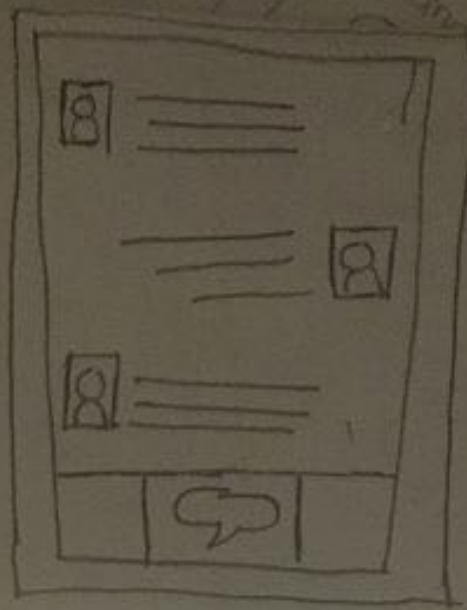

The user would open the app and be greeted by the logo of the app.

The User will then be taken to the home screen where they'll see issues that has been going on with bandwidth.

The User can gather more information on the issue and find helpful links which solves the issue that has occurred in which they can follow the steps.

If the user is still experiences with their bandwidth they can chat or call a Professional to assist with the issue and help resolve it.

The final thing the user can do on the app is they'll be able to keep track of their devices which they have connected to the app and the devices bandwidths.

The Person would Pick the Category in which the Issue they are having best fits

Downloading Files

Data

☐ _____

☐ _____

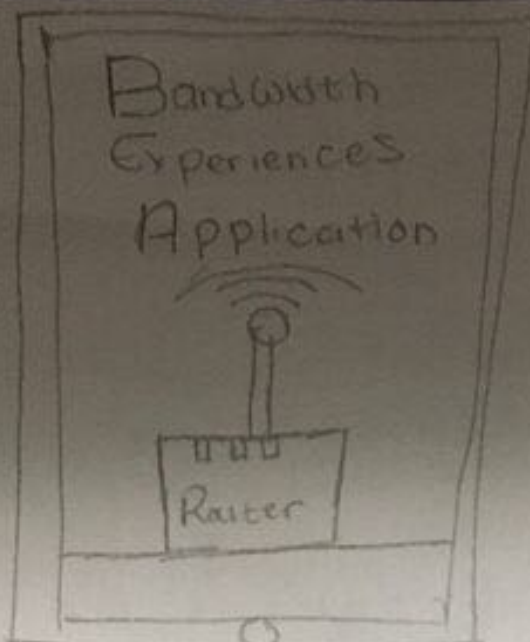

☐ _____

The user can Search and find Someone who has the Same issue as they do.

Answer

After Selecting the Problem a Person Similarly had, the User Can See Other People's Solution to the Issue and Use it to their benefit

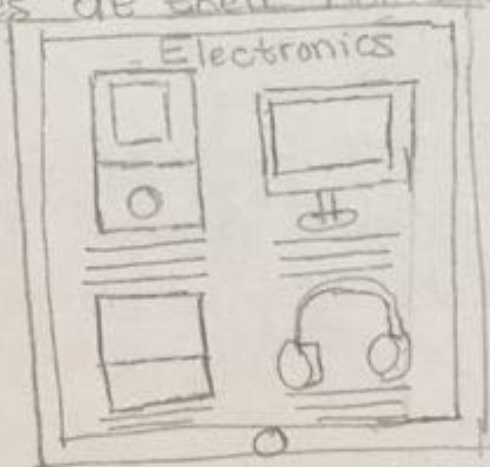

The user will be able to post their own Solution to the Problem which could benefit others.

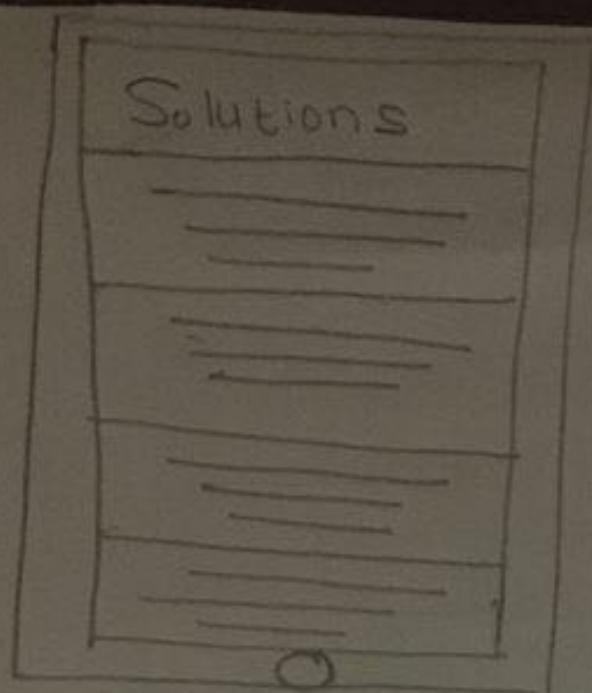

The User will Open the app.

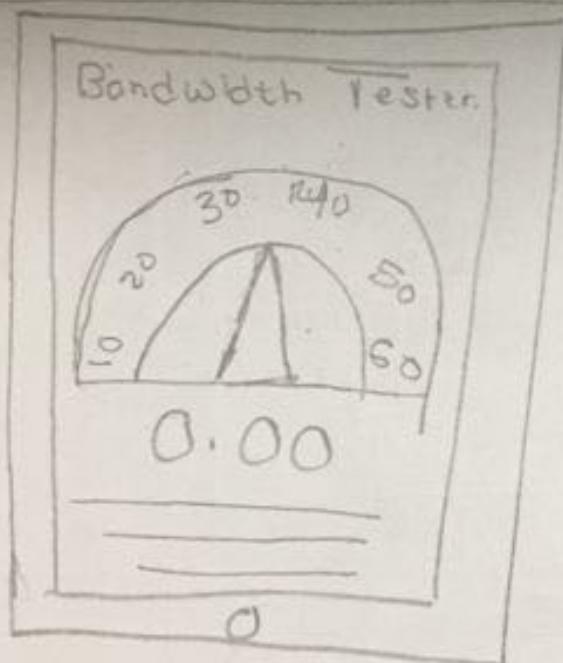

The User will Pick the category which will be linked to the devices at their home to Check.

After Picking the Category the user would like to Check. The app will Provide the User information regarding the amount of bandwidth being used and which helps the user make a decision on the usage.

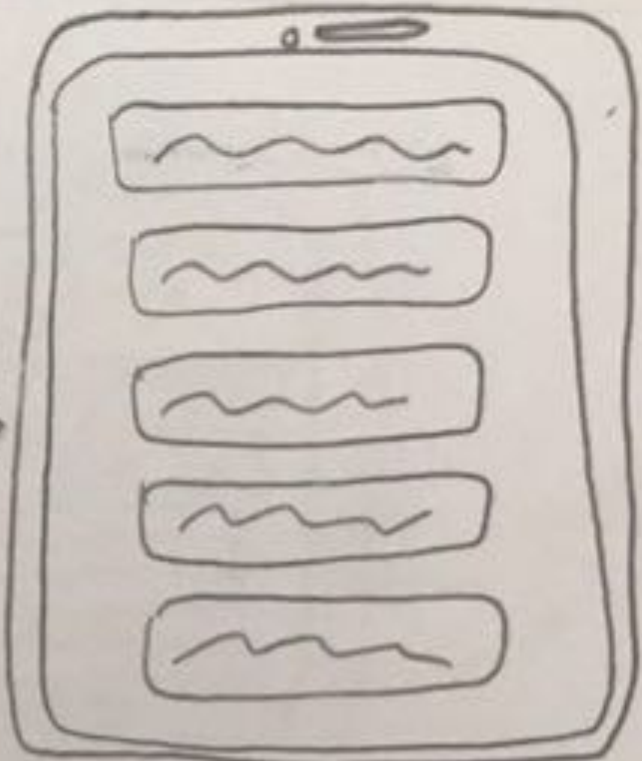

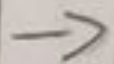

If the user is stuck or needs extra assistance the app will provide a Solutions page to help with the bandwidth situation

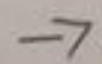

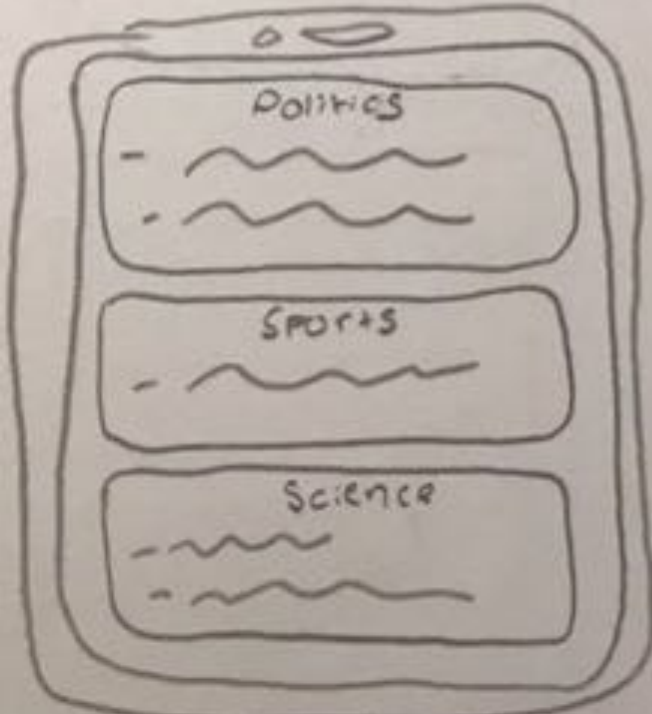

The user will be able to test their bandwidth to see if their connection is in the clear or not
